Year 1

TOP 10 SPECIES

Found in the most blocks

CAN YOU BELIEVE IT?

In one year, the second atlas has nearly reached the totals of the first atlas

Season One Preliminary Results

Wisconsin Breeding Bird Atlas II

wsobirds.org/atlas

What is a block?

The entire state was divided into approximately 3 x 3 mile squares, which we call "blocks."

MAKING HISTORY

Atlas is among the largest citizen-science surveys ever in WI

700 observers surveyed
2,600 atlas blocks and submitted
23,900 checklists documenting
1.7 million birds

8 NEW SPECIES

Not confirmed during the first atlas

Bufflehead
 Eurasian Collared-Dove
 White-eyed Vireo
 Great Tit
 Kirtland's Warbler
 Yellow-throated Warbler
 Whooping Crane
 European Goldfinch

TURKEYS ON THE MOVE

Atlas shows an expansion in their range

Absent from the northern third of the state during the last atlas period, turkeys were reported statewide this year.

Observed Probable
 Possible Confirmed
 Surveyed, no turkeys

Ruby-crowned Kinglet *Regulus calendula*

Trends: Non-breeding

This map depicts the ranked amount of change during the non-breeding season in estimated relative abundance across the years 2007-2016. Circles are colored by ranked increasing or decreasing trends and circle sizes are scaled by the maximum estimated relative abundance across 2007-2016. Light gray circles represent locations with trends not significantly different from zero.

Conservation impacts

ABSTRACT

Ensuring that conservation decisions are informed by the best available data is a fundamental challenge in the face of rapid global environmental change. Too often, new science is not easily or quickly translated into conservation action. Traditional approaches to data collection and science delivery may be both inefficient and insufficient, as conservation practitioners need access to salient, credible, and legitimate data to take action. Open access data could serve as a tool to help bridge the gap between science and action, by providing conservation practitioners with access to relevant data in near real time. Broad-scale citizen-science data represent a fast-growing resource for open access databases, providing relevant and appropriately scaled data on organisms, much in the way autonomous sensors do so on the environment. Several such datasets are now broadly available, yet documentation of their application to conservation is rare. Here we use eBird, a project where individuals around the world submit data on bird distribution and abundance, as an example of how citizen-science data can be used to achieve tangible conservation science and action at local, regional, and global scales. Our examination illustrates how these data can be strategically applied to improve our understanding of spatial and temporal distributions of birds, the impacts of anthropogenic change on ecological systems, and creative conservation solutions to complex problems. We raise awareness of the types of conservation action now happening with citizen-science data, and discuss the benefits, limitations, and caveats of this approach.

Bird Atlas Central?

Passeriformes > Parulidae

Kirtland's Warbler

Setophaga kirtlandii

Identification

POWERED BY [MERLIN](#)

One of the largest and rarest warblers. Breeds only in young jack pine forests in northern Michigan and Wisconsin. Winters in the Bahamas; seldom seen in migration. Blue-gray above and lemon-yellow below with broken white eye-ring, thin white wingbars, and black spotting on sides. Female slightly browner than male. Constantly pumps tail up and down. Most similar to drab female or immature Magnolia Warbler but larger with gray (not greenish) back and tail-pumping behavior. Also compare with Canada Warbler, which has bold black streaks across breast and bold yellow spectacles.

eBirder since **20 Sep 2005**

Oldest checklist: **5 May 1979**

Oldest media: **23 Jun 2016**

My early birding began in the 80's, when I spent most of my time in Dane Co. Then I branched out to Iowa & Sauk Co as they were then somewhat under-birded counties. In the early 90's I was inspired to bird in every county when I traveled to every corner ...
